

DE0-CV Board

1. Overview

The optimized DE0-CV is a robust hardware design platform which uses the Altera Cyclone V FPGA device as the center control for its peripherals such as the on-board USB Blaster, video capabilities and much more. With this amazing platform, you will get the power and the performance you need for high-volume applications, including prototyping bridging, motor control drives, capture cards and handheld devices at the lowest costs. The DE0-CV is the perfect showcasing and evaluation solution which we've kept all the prototyping features on a small 128x99mm development board.

The DE0-CV contains all components needed to use the board in conjunction with a computer that runs the Microsoft Windows XP or later.
